

12. (New) The fastener clip as claimed in claim 11 further comprising a second connector post connecting said second cross bar of said first fastener to said second cross bar of said second fastener.

13. (New) The fastener clip as claimed in claim 10 wherein said first fastener and said second fastener are spaced at a pitch of approximately 0.032 inch.

14. (New) The fastener clip as claimed in claim 10 further comprising one or more additional fasteners connected to said runner bar and arranged in a parallel, side-by-side, spaced relationship and wherein said runner bar extends in a first direction beyond said first fastener and in a second direction beyond said one or more additional fasteners in an unequal fashion so as to easily indicate which end of said runner bar is to be inserted into a fastener dispensing tool.

15. (New) The fastener clip as claimed in claim 10 wherein said off center stub has a flat inner surface.

16. (New) The fastener clip as claimed in claim 10 wherein each of said first cross bar of said first fastener and said first cross bar of said second fastener has a length of about 0.11 inch.

17. (New) The fastener clip as claimed in claim 10 further comprising a second off center stub, said second off center stub connecting said elongated runner bar to said first cross bar of said second fastener.

18. (New) A fastener clip comprising:

a. a first fastener, said first fastener comprising a flexible filament having a first cross bar at a first end thereof, said first cross bar having a length of approximately 0.11 inch;

b. a second fastener, said second fastener comprising a flexible filament having a first cross bar at a first end thereof;

c. said first fastener and said second fastener being arranged in a parallel, side-by-side, spaced relationship;

d. an elongated runner bar spaced apart from the first cross bars of said first and second fasteners;

e. a first stub connecting said elongated runner bar to said first cross bar of said first fastener; and

f. a second stub connecting said elongated runner bar to said first cross bar of said second fastener.

19. (New) The fastener clip as claimed in claim 18 wherein said first cross bar of said second fastener has a length of approximately 0.11 inch.

20. (New) The fastener clip as claimed in claim 18 wherein said first fastener and said second fastener are spaced at a pitch of approximately 0.032 inch.

21. (New) The fastener clip as claimed in claim 18 wherein said flexible filament of said first fastener has a length of approximately 0.176 inch.

22. (New) The fastener clip as claimed in claim 18 further comprising a first connector post connecting said first cross bar of said first fastener to said first cross bar of said second fastener.

23. (New) The fastener clip as claimed in claim 18 wherein said first fastener further comprises a second cross bar at a second end of said flexible filament and wherein said second fastener further comprises a second cross bar at a second end of said flexible filament.

24. (New) The fastener clip as claimed in claim 23 further comprising a first connector post and a second connector post, said first connector post connecting said first cross bar of said first

fastener to said first cross bar of said second fastener, said second connector post connecting said second cross bar of said first fastener to said second cross bar of said second fastener.

25. (New) The fastener clip as claimed in claim 18 wherein said first stub connects said elongated runner bar to said first cross bar of said first fastener in an off-center manner and wherein said second stub connects said elongated runner bar to said first cross bar of said second fastener in an off-center manner.

26. (New) A fastener clip comprising:

a. a first fastener, said first fastener comprising a flexible filament having a first cross bar at a first end thereof;

b. a second fastener, said second fastener comprising a flexible filament having a first cross bar at a first end thereof;

c. said first fastener and said second fastener being arranged in a parallel, side-by-side, spaced relationship at a pitch of approximately 0.032 inch;

d. an elongated runner bar spaced apart from the first cross bars of said first and second fasteners;

e. a first stub connecting said elongated runner bar to said first cross bar of said first fastener; and

f. a second stub connecting said elongated runner bar to said first cross bar of said second fastener.

27. (New) The fastener clip as claimed in claim 26 further comprising a first connector post connecting said first cross bar of said first fastener to said first cross bar of said second fastener.
